Domestic Insect Control

Course information:
Insects can be found in nearly all environments and are among the most diverse group of animals on the planet, representing more than half of all known living organisms.
This course can be registered with NRROSO. Please ask for details.

Who is the course for?
Our 2-day Domestic Insect Control course is aimed at candidates who wish to undertake pest control in land-based or related industries. It is also suitable for those who wish to provide a commercial pest control service for these industries.
Experienced operators may wish to attend our course as a refresher.

Course objectives:
To enable candidates to:
✓ Understand how insects live, breed & develop & how they fit into the animal kingdom
✓ Select & carry out the most appropriate methods of insect control in accordance with current legal guidelines & recognised good practice
✓ Describe the lifestyle, habits & habitats of the main insects found in & around domestic premises
✓ Understand the way insecticides are applied & the importance of maintaining application equipment to a high standard
✓ Understand the importance of storing, transporting, using & disposing of insecticides safely & legally with due regard to the environment

Course content:
▪ The biology & behaviour of insects
▪ Current insecticides & formulations
▪ The biology & control of:
